**“Winning Oz Lotto is Easy –  
It’s Making a Profit That’s Difficult.”**

You probably already know that it takes 45,379,620 games to guarantee first prize in Oz Lotto. Even if you did have \$45 million to spend, you would not make a profit most weeks.

If first prize is \$60 million, paying for all the winning combinations would not necessarily mean you would make \$15 million profit; if there are two winners, then you actually make a \$15 million loss.

***So, in our search to find the best way to play Oz Lotto, we must look at things quite differently. We start by looking at HOW MANY winning numbers can we GUARANTEE with various combinations.***

Obviously, you can ensure you have all nine winning numbers (7 main +2 supplementary) if you simply mark all 45 numbers in seven games (four numbers marked twice) - but of course most people are too lazy to even mark their own coupons.

The next step is to ask, “How many games do we need to play to guarantee TWO or more winning numbers will be together?” The answer, surprisingly, is just 8 games. However, we take this a step further and increase it to 13 games. Why?

Because 13 games of seven numbers equals 91 numbers in total. This allows us to make sure that we have all 45 numbers marked twice, ensuring that we have all nine winning numbers twice. With main and supplementary balls, this guarantees 18 winning numbers spread over 13 games. Isn't this a much better way to play than trusting everything to Lady luck?

Here is how those 13 games look, our free gift to you:

1 **6** 21 28 36 37 42

1 7 12 28 31 40 42

2 3 16 27 33 43 44

2 **6** 11 13 18 35 38

3 14 19 32 33 39 44

4 5 11 15 18 24 40

4 9 23 29 31 32 35

5 10 15 16 20 21 36

7 19 20 22 29 30 38

**8** 10 14 17 26 31 41

**8** 22 24 26 30 37 43

9 17 25 27 34 41 45

12 13 23 25 34 39 45

However, we strongly recommend that you transpose some of the numbers rather than use them exactly as they are about. To do this, change at least 8 to 10 of the numbers above, eg, where you find 6 and 8, swap the numbers; this gives you –

1 **8** 21 28 36 37 42

1 7 12 28 31 40 42

2 3 16 27 33 43 44

2 **8** 11 13 18 35 38

3 14 19 32 33 39 44

4 5 11 15 18 24 40

4 9 23 29 31 32 35

5 10 15 16 20 21 36

7 19 20 22 29 30 38

**6** 10 14 17 26 31 41

**6** 22 24 26 30 37 43

9 17 25 27 34 41 45

12 13 23 25 34 39 45

By swapping 8 to 10 numbers of the 45, you get a set of numbers that is unique to you. We recommend this approach for individual players, as 13 games is affordable for most.

The next step is to ask, "How many games do we need to play to guarantee three or more of the winning numbers together?"

The answer is 118 games. Because we play all 45 numbers at least 18 times, you are guaranteed at least 162 winning numbers, spread over 118 games, and arranged in such a way that three or more of the seven main numbers will be together.

Because the mathematics are getting increasingly complicated now, it is usually too difficult to create these 118 games yourself.

In addition, playing 118 games is really a group entry; we recommend 10 to 15 people, maybe a workplace syndicate or a family syndicate.

If you would like us to create these 118 games for you, please Paypal \$25 to [terry.aust@gmail.com](mailto:terry.aust@gmail.com) and we'll make it happen for you.

The next step up of course is to ask, "How many games do we need to play to guarantee FOUR OR MORE of the 7 main numbers together?" - **A result that guarantees a win of some kind.**

**What if I told you that it takes only 505 games to guarantee a win of some kind? That is just 0.000011% of the full 45,379,620 games required to guarantee first prize.**

Even this does not necessarily guarantee a profit, but it does guarantee a win of some kind. In just 505 games!

What we are essentially doing is **using highly advanced mathematics to get four of the seven winning numbers**, and then relying on Lady luck for the remaining three numbers; this is obviously a lot smarter than relying on Lady luck for all seven numbers.

***What is interesting is that the 505 games deliver all 9 winning numbers (including supps) at least 77 times each. So, our mathematical approach delivers at least 690 winning numbers (including supps) spread over 505 games.***

Think about that for a moment. *A system 12 in Oz Lotto requires 792 games – And it is possible to get NO winning numbers at all!* Yet, in just 505 games you can GUARANTEE a Payout of some kind. In fact, **your 505 games guarantee at least 690 winning numbers (incl. supps).**

And the cost of playing Oz Lotto is subsidised by regular small wins, while at the same time improving the odds of getting all seven main winning balls together.

However, 505 games are too expensive for our philosophy of ensuring that people play within their means.

So, strange as it may seem, you cannot actually buy this system - the only way to get involved is for you to create one of our **Private Oz Lotto Syndicates.**

We provide the 505 game entry for you to run syndicates with 15 to 20 members. This makes the cost affordable for everyone,

with Shares at around \$47 each (cost of Oz Lotto differs slightly in each State) for 15 Shares and around \$35 for 20 Shares.

In addition, we only play when Oz Lotto jackpots to \$20 million or more. This ensures that every syndicate member receives a minimum of \$1 million (assuming only 1 winner).

**Another important point to remember is that the odds of winning Oz Lotto are 1 in 45,379,620 for a single game – BUT the cost of playing is the same – whether the Oz Lotto Jackpot is \$5 Million or \$50 Million.**

Neither the Odds or the Cost change, regardless of how high the jackpot gets. This is another reason we only play once the Jackpot reaches \$20 million.

So, let's look at how our Private Lotto Syndicates work.

## How Our Private Lotto Syndicates Work

If you are a Lotto Agent, you can massively boost your income by **becoming an Agent for our "Must Win Something" Private Lotto Syndicates**. You can give people free copies of this Report until you have enough applicants to fill a Syndicate and then apply to us to create your numbers. My involvement is limited to creating a 505-game system that will guarantee you have a win of some kind for your members.

Depending on where you live in Australia, the total cost will be around \$670; it differs slightly from State to State depending on Agents commission.

If you are running a 15-person syndicate, the cost will be around \$47 for each of the 14 people, with my share being in exchange for my expertise in setting up a syndicate for you that is guaranteed a win of some kind. If you are running a 20-person Syndicate, the cost is around \$37 per member.

BUT, why should you listen to me? Is THREE First prizes a good enough reason? Plus, check out the Free Gift on page 10!

## **OK – But Does It Work?**

---

---

A fair question. Once you have signed up, I will email the 505 games to you (these are **different** for each Oz Lotto syndicate, **your numbers are unique to you**).

Your numbers will be in the format of an Excel spreadsheet, which you can print out and give to members. This also helps to check the numbers by using the find and replace function within Excel (I use, find 9 and replace with 9Main, or 9Supp). The easiest way of course is to simply run the tickets through your terminal.

In addition, you can of course use the Excel “find and replace” function to check as many sets of winning numbers as you like BEFORE you launch.

**If we have four winning numbers every week - we are over halfway was getting all seven!**

## A Free Gift For Your Members

Once you send me a list of the 14 (or 19) members in the syndicate (with their e-mail address), I will e-mail to each one a complimentary copy of my book, "Winning Lotto - Discover How I Won A Prize Six Weeks Out Of 10" (sold for \$27)

**Winning Lotto -  
Discover How I Won  
A Prize 6 Weeks Out Of 10**

**The Secrets of a 3-Time  
Lotto Winner Revealed!**

**100%  
SATISFACTION  
GUARANTEED**

**From 3-Time  
Lottery Winner  
Terry Fisher**

**Includes Screenshots of Actual  
Coupons and "Winner" Stamp**

**6 Wins were Minor Prizes, not First Prizes; But We Have Won  
First Prize 3 Times! We Play For Regular Small Wins, As Well As First Prize**

This is designed for Monday, Wednesday, and Saturday Lotto, and is cheap enough for individuals to play.

Full details, including screen shots of the actual tickets, are at [www.WinningLottoBooks.com](http://www.WinningLottoBooks.com)

## **About Us**

I have won First Prize on three separate occasions. The first was using 50 different system 8's way back in 2006. The second was using 17 different system 11's in 2010. Our latest win was in 2015, using 74 different system 8's. Proof can be found at [www.WinningLottoBooks.com](http://www.WinningLottoBooks.com)

All of these Syndicate entries were constructed using a scientifically configured approach, using the information published in "1000 weeks of Lotto", along with the vast experience I have gained from working with lottery syndicates over the last 20 years.

In addition, I have won several different five number prizes, including \$76,000 from a Division 2 Australian Powerball Syndicate (one number away from a \$22 million win). Counting only my major wins, my personal share from the syndicates has totalled around \$200,000. I also have a Lotto book showing how I won the lottery six weeks out of 10 (minor wins only), playing the Lottery at a discount of almost 40%. (please see [www.WinningLottoBooks.com](http://www.WinningLottoBooks.com) for details).

My background is as an international Management Consultant with 13 years overseas experience. I have qualifications as a Management Consultant, and I am a Fellow of the Institute of Management (UK) and a Fellow of the Chartered Institute of Management Accountants. I have had a fascination with numbers all of my life and enjoy the challenges of putting together Lotto syndicates, including using the skills from my business life alongside my fascination with analysing the best way to play lotto.

I look forward to setting up a Private Lotto Syndicate for you.

## Yes, But What If ...

I get a lot of Yes, But What Ifs. My view is that 505 games to Guarantee 4 of the main 7 numbers is the most **cost-effective** way to play.

Yes, But What If ... we could guarantee FIVE of the main 7 numbers? Can do. BUT I never quite finished it. Once I got over 10,000 games, I had to ask, what is better:

- 12,000 to 15,000 games to guarantee FIVE of the main 7 numbers, or
- 505 games to guarantee FOUR of the main 7 numbers?

The next option – I think a plausible one – was what about using System 8's? It takes 368 different System 8's to guarantee 4 of the main 7 numbers, but the extra (8<sup>th</sup>) number gives us a better chance of going beyond 4 main 7 numbers – and gives us multiple wins within a System 8. In total, we are playing 2,944 games, so I think this is a better option than trying to reach a 5-from-7 guarantee.

System 8's are also highly effective where multiple payments are concerned. Any win above "4 numbers + 1 supplementary" pays out on ALL 8 games played!

I am obviously open to discussing options over a coffee, but I have been doing this for a while and think the 505 game option is the smart play.

But, hey, ring me on 0468 420 470 and let's talk!
